

Zeyad Salama

Backend Software Engineer | Python & Django

Egypt | zeyadslama23@gmail.com | +20 1017595972 | LinkedIn | GitHub

Professional Summary

Backend Software Engineer specializing in **Python, Django, Django REST Framework, and PostgreSQL**, with experience building multi-tenant SaaS, ERP, financial, delivery, e-commerce, education, and real-estate platforms. Strong background in REST APIs, transactional workflows, authentication, database design, real-time systems, asynchronous processing, automated testing, and production backend architecture.

Professional Experience

Adex

Backend Developer

Mar 2026 – Present

Amman, Jordan – Remote

Multi-Tenant SaaS ERP

- Architected a **schema-per-tenant PostgreSQL SaaS ERP** supporting approximately **25+ tenant environments** with isolated business data.
- Engineered a **double-entry accounting engine** with idempotent journal posting, multi-currency COGS, and controlled calculate-lock-finalize-post payroll workflows.
- Designed transaction-safe financial services handling more than **100,000+ accounting records** while preserving auditability and consistency.

China System – Multi-Tenant B2B Trade Platform

- Developed a **multi-tenant B2B trade platform** with tenant-isolated business data, financial workflows, and transaction-safe services.
- Built a CSV/XLSX import pipeline processing up to **50,000+ records per batch**, using per-record transactions to isolate failures without rolling back successful imports.
- Implemented automated balance-sheet aggregation and multi-currency foreign-exchange tracking for financial reporting.

Sahifatty – Quran Learning and Assessment Platform

- Developed a modular REST API for Quran content, assessments, study plans, teacher-student groups, recommendations, onboarding, and contribution workflows.
- Implemented HTTP-only JWT authentication, OTP verification, password recovery, Google/Apple/Facebook OAuth, child accounts, and granular role-based permissions.
- Built APIs for **6,236 Quran verses**, hierarchical subjects, configurable study templates, related-verse discovery, and weighted learning-progress analytics.
- Engineered teacher-student workflows and transactional bulk operations with validation and rollback protection; optimized ORM access using eager loading, annotations, and bulk queries.
- Developed OneSignal/in-app notifications and comprehensive Pytest coverage; prepared production deployment with Unicorn, WhiteNoise, and security-focused settings.

AquaCloud / Geenade – Multi-Tenant Delivery Platform

- Developed a **multi-tenant delivery backend** with **60+ REST API handlers** covering tenants, branches, customers, delivery agents, catalogs, orders, and notifications.
- Implemented passwordless OTP, HTTP-only JWT sessions, CSRF protection, token rotation, throttling, account lockout, tenant isolation, and branch-level authorization.
- Engineered an auditable prepaid-coupon ledger with reserved/available balances, immutable entries, row-level locking, database constraints, and idempotent reserve-settle-release workflows.
- Built atomic order lifecycles, WebSocket notifications, and Celery-powered recurring delivery tours and reminders using Redis and Django Channels.
- Created **300+ automated tests** covering authentication, authorization, tenant isolation, concurrency-sensitive operations, orders, WebSockets, and scheduled tasks.

Barcode Jackets – Custom Apparel E-Commerce Platform

- Developed a modular REST API for garment customization, multi-store catalogs, inventory, pricing, orders, payments, CMS functionality, and delivery partners.
- Built an SVG-based customization engine supporting configurable layers, placement zones, text, images, fonts, colors, materials, and sizes.
- Engineered inventory reservations, quantity-based pricing, promotion rules, group orders, deposits, and transactional payment/refund lifecycles.
- Applied service-layer architecture, atomic transactions, UUID identifiers, optimized ORM queries, and Swagger/ReDoc API documentation.

Sukoon – Real Estate Platform API

Jun 2026 – Sep 2026

Freelance Project

Backend Developer

- Developed a versioned REST API supporting property listings, profiles, media, search, filtering, ordering, pagination, and property discovery.
- Implemented HTTP-only JWT authentication, refresh-token rotation, Argon2 hashing, rate limiting, role-based permissions, and Google/Apple/Facebook authentication.
- Built property-visit booking with owner/tenant authorization, duplicate-booking protection, database constraints, and controlled status transitions.
- Optimized ORM queries using indexes, annotations, subqueries, `select_related`, and `prefetch_related`; integrated Cloudinary and Redis-backed Django Channels.
- Wrote **100+ automated tests** covering authentication, permissions, listings, profiles, bookings, query efficiency, and WebSocket behavior.

Negm Feed

Feb 2025 – Aug 2025

Backend Developer

Mansoura, Egypt

- Developed Django modules and REST APIs for invoicing, payment processing, client/employee management, balance summaries, and financial reporting.
- Integrated Stripe workflows and WeasyPrint-based generation of financial and operational PDF reports.

Information Technology Institute (ITI)

Jul 2023 – Sep 2023

Backend Developer

Mansoura, Egypt

- Built Django backend features, PostgreSQL schemas, secure REST APIs, and optimized queries using Redis, Docker, and Git.

New Horizons

Oct 2022 – Feb 2023

System Administrator

Mansoura, Egypt

Managed Linux/Windows Server infrastructure, networking, server provisioning, and cloud-related services.

Mansoura University

Aug 2022 – Oct 2022

Backend Developer Intern

Mansoura, Egypt

Developed Django backend modules, REST APIs, and PostgreSQL-backed functionality for academic projects.

New Horizons

Sep 2020 – Jan 2021

Networking & Systems Intern

Mansoura, Egypt

Completed hands-on internships/training in **CCNA networking, MCSA/Windows Server administration, and Linux system administration.**

Technical Skills

Languages: Python, JavaScript **Backend:** Django, DRF, Django Channels, REST APIs, Service-Layer Architecture

Databases: PostgreSQL, MySQL, Transactions, Row-Level Locking, Database Constraints, Schema-per-Tenant

Async/Real-Time: Celery, Redis, RabbitMQ, WebSockets, ASGI **Security:** JWT, HTTP-only Cookies, OAuth, OTP, RBAC, CSRF, Argon2

Testing/API: Pytest, Pytest-Django, Postman, Swagger/OpenAPI, ReDoc

Infrastructure: Docker, DigitalOcean, AWS S3, Cloudinary, Nginx, Gunicorn, Uvicorn, WhiteNoise, Linux, CI/CD, Git

Integrations: Stripe, OneSignal, Firebase Admin

Education

Mansoura University – Bachelor of Computer and Information Sciences, Software Engineering

2020 – 2024
