Zeyad Salama

Full Stack Software Engineer | Python, Django, React & Node.js

Egypt | zeyadslama23@gmail.com | +20 101 759 5972 | LinkedIn | GitHub | Portfolio (zeyad.pro)

Professional Summary

Software Engineer specialized in architecting scalable multi-tenant SaaS platforms, high-throughput transactional workflows, and resilient REST/WebSocket backends. Proficient in Python, Django, PostgreSQL, React, and Next.js, with demonstrated production expertise in schema-per-tenant architectures, double-entry financial ledgers, Celery/Redis asynchronous workers, concurrency-safe locking (`SELECT FOR UPDATE`), and comprehensive test automation (Pytest).

Professional Experience

Adex **Mar 2026 – Present**
Backend Developer *Amman, Jordan – Remote*

Multi-Tenant SaaS ERP

- Architected a **schema-per-tenant PostgreSQL SaaS ERP** supporting **25+ isolated tenant environments** across accounting, HR/payroll, inventory, and procurement.
- Engineered an auditable **double-entry accounting engine** with idempotent journal posting, multi-currency COGS, and automated period-closing reconciliations handling over **100,000+ ledger entries**.
- Designed a stateful **calculate–lock–finalize–post payroll workflow** enforcing strict approval controls, row-level locking, and transactional balance protections.

China System – Multi-Tenant B2B Trade Platform

- Developed a **multi-tenant trade operations platform** managing manufacturers, purchase orders, sales invoices, partner balances, and multi-currency payments in a unified workspace.
- Built an asynchronous CSV/XLSX batch-import pipeline handling up to **50,000+ records per batch**, utilizing per-row subtransactions to isolate validation errors without failing entire datasets.
- Engineered automated balance-sheet aggregation and real-time foreign-exchange tracking for cross-border financial reconciliation.

Sahifati – Quran Learning and Assessment Platform

- Developed a production REST API supporting **114 Surahs, 6,236 verses**, hierarchical study templates, teacher–student group portals, and weighted learning analytics (deployed on App Store & Google Play).
- Implemented security-hardened authentication featuring HTTP-only JWT sessions, SMS/Email OTP verification, OAuth 2.0 (Google, Apple, Facebook), child accounts, and granular RBAC.
- Optimized high-traffic ORM queries via eager loading (`select_related`, `prefetch_related`), DB annotations, and bulk queries to eliminate $N + 1$ latency.
- Integrated OneSignal push notifications, Celery event pipelines, and robust Pytest suites ensuring complete rollback safety during bulk evaluation submissions.

Ghaith Adex – Multi-Tenant Water Delivery Platform (Al Junaidi)

- Architected the backend for two mobile applications (Customer & Driver) with **60+ REST API endpoints** spanning tenants, branches, delivery fleets, route tours, and billing.
- Engineered an auditable **prepaid-coupon financial ledger** with available vs. reserved balances, row-level locks (`SELECT FOR UPDATE`), and idempotent reserve–settle–release flows.
- Built real-time order tracking and dispatch notifications with **Django Channels, Redis WebSockets**, and Celery-managed recurring delivery schedules.
- Authored **300+ automated Pytest tests** validating concurrency constraints, tenant isolation boundaries, authentication throttling, and WebSocket events.

Adex **Mar 2026 – Present**
Backend Developer – continued

Barcode Jackets – Custom Apparel E-Commerce Platform

- Engineered the commerce API and service-layer backend for a custom-apparel storefront featuring an SVG customization engine, multi-store catalogs, and real-time inventory reservations.
- Developed group-order workflows with shared design boards, individual size selection, automated deposit collection, split payment tracking, and transactional refund handling.
- Implemented UUID identifiers, atomic transactional boundaries, dynamic tiered pricing, and auto-generated OpenAPI/Swagger specifications.

Sukoon **Jun 2026 – Sep 2026**
Full Stack Developer *Egypt – Remote*

- Developed property rental discovery, inquiry routing, and visit-booking APIs connecting tenants and property owners directly without brokers.
- Integrated Cloudinary media pipelines supporting high-resolution image transformations and 360-degree virtual property tour viewers.
- Built real-time tenant–owner messaging and inquiry status notifications using Django Channels and Redis WebSockets; maintained 100+ automated Pytest tests.

Freelance **Jan 2026 – Mar 2026**
Full Stack Developer *Remote, Egypt*

- Delivered client applications by pairing Django REST Framework backends and PostgreSQL schemas with responsive, bilingual (RTL) React and Next.js interfaces.

Negm Feed **Oct 2024 – Mar 2025**
Backend Developer *Mansoura, Egypt*

- Developed Django business modules and REST endpoints for customer billing, staff ledger balances, inventory tracking, and payment processing.
- Integrated Stripe payment gateways and automated corporate financial PDF statement generation utilizing WeasyPrint.

Information Technology Institute (ITI) **Jul 2023 – Sep 2023**
Backend Developer *Mansoura, Egypt*

- Built relational PostgreSQL schemas, secure RESTful APIs, and query-caching layers using Django, Redis, Docker, and Git.

New Horizons **Oct 2022 – Feb 2023**
System Administrator *Mansoura, Egypt*

Managed Linux/Windows Server infrastructure, network configuration, DNS/firewall policies, and server provisioning.

Mansoura University **Aug 2022 – Oct 2022**
Backend Developer Intern *Mansoura, Egypt*

Implemented Django backend services, PostgreSQL database models, and internal academic portal APIs.

New Horizons **Sep 2020 – Jan 2021**
Networking & Systems Intern *Mansoura, Egypt*

Completed hands-on certifications and lab training in CCNA networking, Windows Server administration (MCSA), and Linux system management.

Technical Skills

Languages: Python, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3
Backend & Frameworks: Django, Django REST Framework (DRF), Django Channels, Node.js, Express, FastAPI, Celery, Redis, RabbitMQ, ASGI, WebSockets, Service-Layer Architecture
Databases & Data Systems: PostgreSQL, MySQL, MongoDB, Multi-Tenancy (Schema-per-Tenant), Row-Level Locking (`SELECT FOR UPDATE`), ACID Transactions, Database Constraints, Query Optimization
Frontend: React, Next.js (App Router), Tailwind CSS, State Management, Responsive & Bilingual (RTL) Design
Security & Auth: JWT (HTTP-only Cookies), OAuth 2.0 (Google, Apple, Facebook), Passwordless OTP, RBAC, CSRF Protection, Token Rotation, Argon2
Testing & Documentation: Pytest, Pytest-Django (300+ Test Suites), Swagger / OpenAPI, ReDoc, Postman
DevOps & Cloud: Docker, DigitalOcean, AWS S3, Cloudinary, Nginx, Gunicorn, Uvicorn, WhiteNoise, Linux/Bash, CI/CD (GitHub Actions), Vercel

Education

Mansoura University – Bachelor of Computer and Information Sciences, Major: Software Engineering **2020 – 2024**
